## Introduction

The American Speech-Language-Hearing Association (ASHA) conducted the 2017 SLP Health Care Survey to gather information from speech-language pathologists (SLPs) about the workforce, service provision, earnings, and other professional topics. Results from this survey are presented in a series of reports, including this report on annual salary trends.

Results from the 2005, 2007, 2009, 2011, 2013, and 2015 ASHA SLP Health Care Surveys are included in this report for comparative purposes. Questions differ among surveys; therefore, data on all topics are not available for all survey years.

The salaries presented in this report are full-time gross salaries (salaries prior to deductions). They include bonuses. The statistic that is presented is the median (i.e., middle or 50th percentile). Median salaries are presented because they are more stable than means (i.e., averages) and are less sensitive to extreme values. To preserve confidentiality and provide more certain results, we have not reported data for groups of fewer than 25 .

## Survey Report Highlights

- In 2017, $34 \%$ of SLPs in health care settings were paid an annual salary in their main jobs, about the same as in recent past years ( $30 \%-35 \%$ from 2007 to 2015).
- In 2017, $88 \%$ of SLPs in health care settings who were paid an annual salary in their main jobs worked full time - the same, or about the same, as in recent past years ( $86 \%-90 \%$ from 2005 to 2015).
- In 2017, SLPs in health care settings reported an overall median salary of $\$ 78,000$, up from $\$ 75,000$ in 2015 (a 4\% increase).
- From 2005 to 2017, SLPs in skilled nursing facilities typically reported a higher median salary than SLPs in other health care settings.
- In 2017, SLPs who were primarily clinicians reported a median salary of $\$ 72,000$, up from \$70,000 in 2015 (a 3\% increase).
- In 2017, SLPs who held primarily administrative or supervisory positions reported a median salary of \$96,000, up from \$93,534 in 2015 (a 3\% increase).
- From 2005 to 2017, the median salary of SLPs tended to increase with their years of experience in the profession.
- From 2005 to 2017, SLPs in the West reported a higher median salary than SLPs in the Northeast, Midwest, and South.
- From 2005 to 2017, SLPs who worked in rural areas typically reported the same or a higher median salary than SLPs who worked in suburban and city/urban areas.

## Pay Basis

In 2017, $34 \%$ of SLPs in health care settings were paid an annual salary in their main jobs, about the same as in recent past years ( $30 \%-35 \%$ from 2007 to 2015; see Appendix Table 1). The remainder of SLPs were paid per hour (55\%) or per home visit (12\%).

## Employment Status

In 2017, $88 \%$ of SLPs in health care settings who were paid an annual salary in their main jobs worked full time - the same, or about the same, as in recent past years ( $86 \%-90 \%$ from 2005 to 2015; see Figure 1).

Figure 1. Percentage of SLPs in health care settings who were paid an annual salary in their main jobs and worked full or part time, by year.

Note. These data are from the 2005, 2007, 2009, 2011, 2013, 2015, and 2017 ASHA SLP Health Care Surveys. Employed part time was not defined in the surveys.
$n=722$ (2005); $n=798$ (2007); $n=659$ (2009); $n=782$ (2011); $n=634$ (2013); $n=508$ (2015); $n=632$ (2017).

## Annual Salaries

In 2017, SLPs who were employed full time in health care settings reported an overall median salary of $\$ 78,000$, up from $\$ 75,000$ in 2013 and 2015 (a $4 \%$ increase; see Figure 2 and Appendix Table 2). The median salary is the salary at which half of the SLPs earned more than that amount and half earned less.

Figure 2. Overall median annual salaries of SLPs who were employed full time in health care settings, by year.

Note. These data are from the 2005, 2007, 2009, 2011, 2013, 2015, and 2017 ASHA SLP Health Care Surveys. $n=630$ (2005); $n=648$ (2007); $n=525$ (2009); $n=682$ (2011); $n=546$ (2013); $n=425$ (2015); $n=499$ (2017).

As shown in the remainder of the report, numerous variables-including work setting and role, years of experience in the profession, geographic region, and the type of area in which one works-affect earnings.

## Annual Salaries, by Health Care Setting

From 2005 to 2017, SLPs in skilled nursing facilities typically reported a higher median salary than SLPs in other health care settings. In 2017, they reported a median salary of $\$ 90,000$-the same as in 2013 and 2015 (see Appendix Table 2). SLPs in outpatient clinics/offices reported the lowest, or among the lowest, median salaries. In 2017, they reported a median salary of $\$ 73,000$, up from $\$ 68,000$ in 2015 (a $7 \%$ increase).

## Annual Salaries, by Work Role

## Clinicians

In 2017, SLPs who were primarily clinical service providers reported an overall median salary of $\$ 72,000$, up from \$70,000 in 2015 (a 3\% increase; see Appendix Table 3).

From 2005 to 2017, clinicians in general medical, Veterans Affairs (VA), and long-term acute care (LTAC) hospitals and skilled nursing facilities typically reported a higher median salary than clinicians in other health care settings. In 2017, clinicians in general medical, VA, and LTAC hospitals reported a median salary of $\$ 80,000$, up slightly from $\$ 79,540$ in 2015 (a $1 \%$ increase). In 2017, clinicians in skilled nursing facilities reported a median salary of $\$ 79,134$, down slightly from $\$ 79,981$ in 2015 (a 1\% decline).

## Administrators and Supervisors

In 2017, SLPs who held primarily administrative or supervisory positions reported an overall median salary of $\$ 96,000$, up from $\$ 93,534$ in 2015 (a $3 \%$ increase; see Appendix Table 4). Most of these SLPs worked in outpatient clinics/offices and skilled nursing facilities. In 2017, SLP administrators/supervisors in outpatient clinics/offices reported a median salary of \$90,000, down a little from $\$ 93,000$ in 2015 (a $3 \%$ decline). Those in skilled nursing facilities reported a median salary of $\$ 95,000$, up from $\$ 92,000$ in 2015 (a $3 \%$ increase).

## Annual Salaries, by Years of Experience

In 2017, overall, the most seasoned SLPs (those with 31 or more years of experience in the profession) reported a median salary of $\$ 91,095$ - this was $\$ 26,095$ more than SLPs just starting out (those with $1-$ 3 years of experience; see Appendix Table 5). The differential was similar in $2013(\$ 26,745)$ and 2015 $(\$ 26,397)$.

## Annual Salaries, by Geographic Region

In 2017, SLPs in the Northeast and South reported an increase in their overall median salary from 2015 (see Appendix Table 6; see page 13 for a key of geographic regions/divisions and corresponding states). After 4 years of salary increases, SLPs in the Midwest reported a decline. SLPs in the West reported a slight decline (less than 1\%).

## Annual Salaries, by Type of Area

From 2005 to 2017, SLPs who worked in rural areas typically reported the same or a higher median salary than SLPs who worked in more densely populated suburban and city/urban areas (see Appendix Table 7). In 2017, SLPs who worked in rural areas reported a median salary of $\$ 82,233$, up from $\$ 78,266$ in 2015 (a 5\% increase). SLPs who worked in suburban areas reported a median salary of $\$ 78,000$, up from $\$ 73,833$ in 2015 (a $6 \%$ increase). SLPs who worked in city/urban areas reported a median salary of $\$ 78,000$, up from $\$ 75,000$ in 2015 (a $4 \%$ increase).

## Survey Methodology

The survey was sent in February 2017 to a random sample of 4,000 ASHA-certified SLPs who were employed in health care facilities in the United States. The sample was stratified by type of facility and by private practice. Of this group, 1,500 SLPs were assigned to a control group to receive the survey via postal mail. They also received a survey pre-notification e-mail at the time of the first postal mailing. Second (March) and third (April) postal mailings followed, at approximately 3- or 4-week intervals. An e-mail with a link to a web-based survey was sent in May to those who had not yet responded. The 2,500 SLPs in the experimental group were sent up to four e-mails with a link to a web-based survey between February and May, as well as up to two surveys sent via postal mail in March and April.

Because facilities with fewer SLPs, such as pediatric hospitals, were oversampled, ASHA used weighting when presenting survey data.

## Response Rates

Of the original 4,000 SLPs in the sample, 11 were retired, seven had incorrect postal mail addresses, 94 were employed in other types of facilities, 13 were not employed in the profession, and three were ineligible for other reasons, which left 3,872 possible respondents. The actual number of respondents was 2,019-a $52.1 \%$ response rate. Past ASHA SLP Health Care Survey response rates were 54.6\% (2005), $63.8 \%$ (2007), $54.6 \% ~(2009), 62.5 \% ~(2011), 53.5 \% ~(2013)$, and $46.9 \% ~(2015)$.

## Annual Salaries, by Type of Area

Table 7. Median annual salaries of SLPs who were employed full time in health care settings, by type of area in which they worked and year.

|  | Median annual salary $\mathbf{( \$ )}$ |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Type of area | $\mathbf{2 0 0 5}$ | $\mathbf{2 0 0 7}$ | $\mathbf{2 0 0 9}$ | $\mathbf{2 0 1 1}$ | $\mathbf{2 0 1 3}$ | $\mathbf{2 0 1 5}$ | $\mathbf{2 0 1 7}$ |
|  | $(\boldsymbol{n}=\mathbf{6 1 9})$ | $(\boldsymbol{n}=\mathbf{6 3 5})$ | $(\boldsymbol{n}=\mathbf{5 1 8})$ | $(\boldsymbol{n}=\mathbf{6 7 0})$ | $(\boldsymbol{n}=\mathbf{5 3 1})$ | $(\boldsymbol{n}=\mathbf{4 1 4})$ | $(\boldsymbol{n}=\mathbf{4 9 2})$ |
| Rural | 60,000 | 67,916 | 70,000 | 74,000 | 75,000 | 78,266 |  |
| Suburban | 60,000 | 65,000 | 70,000 | 68,000 | 70,000 | 73,833 |  |
| City/urban $^{\text {a }}$ | 60,000 | 63,167 | 70,000 | 70,000 | 77,233 |  |  |

Note. These data are from the 2005, 2007, 2009, 2011, 2013, 2015, and 2017 ASHA SLP Health Care Surveys. Definitions of rural, suburban, and city/urban were not provided in the surveys. ${ }^{\text {a FFrom }} 2005$ to 2011, this item was titled "Metropolitan/urban."

[^0]:    Note. These data are from the 2005, 2007, 2009, 2011, 2013, 2015, and 2017 ASHA SLP Health Care Surveys. Dash indicates that the item was not included in the survey analysis. $n / r=$ not reported (to preserve confidentiality and provide more certain results, we have not reported data for groups of fewer than 25).
