Introduction

The American Speech-Language-Hearing Association (ASHA) conducted the 2017 SLP Health Care Survey to gather information from speech-language pathologists (SLPs) about the workforce, service provision, earnings, and other professional topics. Results from this survey are presented in a series of reports, including this report on workforce trends.

Results from the 2005, 2007, 2009, 2011, 2013, and 2015 *ASHA SLP Health Care Surveys* are included in this report for comparative purposes.

Survey Report Highlights

Employment Status

- In 2017, overall, 66% of SLPs who were employed worked full time, about the same as in past years (62%–67% from 2005 to 2015).
- From 2005 to 2017, SLPs in home health care settings were the most likely, or among the most likely, to work part time.

Job Market

- In 2017, overall, 35% of SLPs reported that job openings exceeded job seekers in their type of employment facility and geographic area, up from 28% in 2013 and 32% in 2015.
- From 2005 to 2017, SLPs in home health care settings, outpatient clinics/offices, and skilled nursing facilities were more likely than SLPs in hospitals to report that job openings exceeded job seekers in their type of facility and geographic area.
- From 2005 to 2017, SLPs from the Pacific states (Alaska, California, Hawaii, Oregon, and Washington) were the most likely, or among the most likely, to report that job openings exceeded job seekers in their type of facility and geographic area.

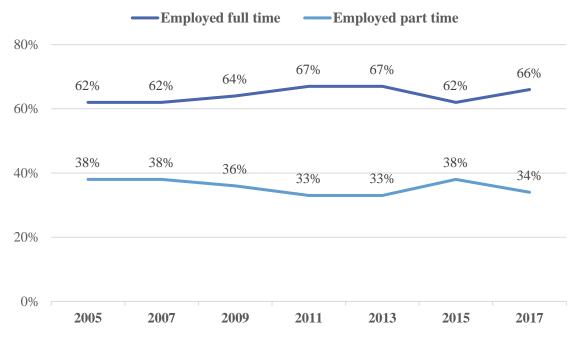

Funded, Unfilled Positons

- In 2017, overall, 26% of survey respondents reported that there were funded, unfilled positions for SLPs at their respective facilities—the same or about the same as in recent past years (20%–27% from 2009 to 2015).
- From 2005 to 2017, respondents in pediatric hospitals were the most likely, or among the most likely, to report that there were funded, unfilled positions for SLPs at their respective facilities.

Employment Status

In 2017, overall, most SLPs who were employed worked full time (66%; see Figure 1 and Appendix, Table 1). This percentage is largely consistent with those of previous survey years.

Note. These data are from the 2005, 2007, 2009, 2011, 2013, 2015, and 2017 *ASHA SLP Health Care Surveys*. *n* = 1,969 (2005); *n* = 2,208 (2007); *n* = 1,947 (2009); *n* = 2,364 (2011); *n* = 1,951 (2013); *n* = 1,719 (2015); *n* = 1,896 (2017).

Employment Status, by Health Care Setting

In most survey years between 2005 and 2017, SLPs in skilled nursing facilities were more likely than SLPs in other health care settings to work full time (see Appendix, Table 1). In 2017, 75% of SLPs in skilled nursing facilities worked full time—the same or about the same as in past years (63%–81% from 2005 to 2015).

From 2005 to 2017, SLPs in home health care settings were the most likely, or among the most likely, to work part time. In 2017, 45% of SLPs in home health care settings worked part time—the same or about the same as in past years (40%–54% from 2005 to 2015).

Job Market

In recent years, ASHA has included a question on its major surveys to assess the job market for SLPs and quantify shortages. The question and response categories were patterned after definitions used by the U.S. Bureau of Labor Statistics. In 2017, overall, 35% of SLPs reported that job openings exceeded job seekers in their type of employment facility and geographic area, up steadily from 28% in 2013 and 32% in 2015 (see Appendix, Table 2).

Job Market, by Health Care Setting

From 2005 to 2017, SLPs in home health care settings, outpatient clinics/offices, and skilled nursing facilities were more likely than SLPs in hospitals to report that job openings exceeded job seekers in their type of facility and geographic area (see Appendix, Table 2).

Job Market, by Geographic Region/Division

From 2005 to 2017, across all health care settings, SLPs from the Pacific states were the most likely, or among the most likely, to report that job openings exceeded job seekers in their type of facility and geographic area (see Appendix, Table 3; see below for a key of geographic regions/divisions and corresponding states). In 2017, 48% of SLPs in the Pacific states reported that job openings exceeded job seekers in their type of facility and geographic area, up steadily from 32% in 2013 and 41% in 2015.

Job Market, by Type of Area

From 2005 to 2017, across all health care settings, SLPs who worked in rural areas were more likely than SLPs who worked in suburban and city/urban areas to report that job openings exceeded job seekers in their type of facility and geographic area (see Appendix, Table 4). In 2017, 49% of SLPs who worked in rural areas reported that job openings exceeded job seekers in their type of facility and geographic area, up substantially from 37% in 2013 and 36% in 2015.

| Geographic region/division | Corresponding states |
|----------------------------|------------------------------------|
| Northeast | |
| New England | CT, ME, MA, NH, RI, VT |
| Mid-Atlantic | NJ, NY, PA |
| Midwest | |

ASHA SLP Health Care Survey Report: Workforce Trends, 2005–2017

Funded, Unfilled Positions

In 2017, overall, 26% of survey respondents reported that there were funded, unfilled positions for SLPs at their respective facilities, about the same as in 2009, 2011, 2013, and 2015 but down substantially from 41% in 2005 and 38% in 2007 (see Figure 2 and Appendix, Table 5).

Figure 2. *Percentage of ASHA SLP Health Care Survey respondents who reported that there were funded, unfilled positions for SLPs at their respective facilities, by year.*

Note. These data are from the 2005, 2007, 2009, 2011, 2013, 2015, and 2017 *ASHA SLP Health Care Surveys.* n = 1,949 (2005); n = 2,281 (2007); n = 1,926 (2009); n = 2,327 (2011); n = 1,934 (2013); n = 1,747 (2015); n = 1,921 (2017).

Funded, Unfilled Positions, by Health Care Setting

From 2005 to 2017, respondents in pediatric hospitals were the most likely, or among the most likely, to report that there were funded, unfilled positions for SLPs at their respective facilities (see Appendix, Table 5). In 2017, 33% of respondents in pediatric hospitals reported funded, unfilled positions for SLPs—the same or about the same as in recent past years (30%–37% from 2009 to 2015).

Funded, Unfilled Positions, by Geographic Region/Division

From 2005 to 2017, across all health care settings, respondents in the Pacific states were the most likely, or among the most likely, to report that there were funded, unfilled positions for SLPs at their respective facilities (see Appendix, Table 6; see page 4 for a key of geographic regions/divisions and corresponding states). In 2017, 33% of respondents in the Pacific states reported funded, unfilled positions for SLPs—about the same as in 2015 (34%).

Survey Methodology

The survey was sent in February 2017 to a random sample of 4,000 ASHA-certified SLPs who were employed in health care facilities in the United States. The sample was stratified by type of facility and by private practice. Of this group, 1,500 SLPs were assigned to a control group to receive the survey via postal mail. They also received a survey pre-notification e-mail at the time of the first postal mailing. Second (March) and third (April) postal mailings followed, at approximately 3- or 4-week intervals. An e-mail with a link to a web-based survey was sent in May to those who had not yet responded. The 2,500 SLPs assigned to an experimental group were sent up to four e-mails with a link to a web-based survey between February and May, as well as up to two surveys sent via postal mail in March and April.

Because facilities with fewer SLPs, such as pediatric hospitals, were oversampled, ASHA used weighting when presenting survey data.

Response Rates

Of the original 4,000 SLPs in the sample, 11 were retired, seven had incorrect postal mail addresses, 94 were employed in other types of facilities, 13 were not employed in the field, and three were ineligible for other reasons, which left 3,872 possible respondents. The actual number of respondents was 2,019—a 52.1% response rate. Past *ASHA SLP Health Care Survey* response rates were 54.6% (2005), 63.8% (2007), 54.6% (2009), 62.5% (2011), 53.5% (2013), and 46.9% (2015).
